DYND Bot can be used to describe or showcase the advantages/USP of any product or brand and to form a high-tech atmosphere as well as can be put in action to create a sci scenario for entertainment purposes. Besides, any shape can be easily customized according to needs & request.

* Different Versions Available
* Modern Appearance

Augmented reality interactive LED display applies the AR technology to a large screen, and the result is something which may change advertising for a lot of different retailers. Normally, companies limit their interactive ads to indoor locations. By using the large LED display in conjunction with existing AR technology, this setup gets around those problems, allowing advertisers to showcase their products outdoor gatherings and giving people at these events something to interact with instead of watching repetitive video again and again. And same concept is applied on small & medium scale with the help of LCD screens or small projectors combined AR Lite technology for the use in schools, institutions, museum, of ces, entertainment zones, etc. Augmented reality makes it possible for people to see themselves interact with virtual animation In the LED/LCD screen. The technology makes use of a special code, which is recognized by a HD motion detect camera embedded in the display. When user stands on it or holds the code, then the vivid 3D image appears.

* Customizable
* Business In Fun
* Create a Brand New Experience

DYND STAR SCRIPT

Star Script is a simple but typical application of interactive system. Users move their hands to turn pages of a projection book. The book supports all kinds of content format, including text, image and video. It also comes with dual display option which projects the book both on table and wall.
